

MailMarshal® as a Service

M86 Security Hybrid Email Filtering Service

MailMarshal as a Service (MaaS) is now available to MailMarshal SMTP and MailMarshal Exchange customers as a hybrid managed service. MaaS offers managed anti-spam, anti-virus, content filtering and image analysis services that can be enabled as a complementary managed service in conjunction with your own MailMarshal server(s).

Deploying MaaS in a hybrid environment means that you can eliminate spam, viruses, blended threats and other unwanted, non-business email in-the-cloud. The key advantage of MaaS is that unwanted email is removed by our services before it is sent to your organization, saving you bandwidth, costs, resources, processing time and administration.

MaaS offers convenience and cost effective up-stream filtering and allows your email administrators to utilize in-house MailMarshal Servers for more productive and company sensitive tasks such as Acceptable Use Policy enforcement, Data Leakage Prevention (DLP) and compliance.

COMBINING MANAGED SERVICE CONVENIENCE WITH INHOUSE PRIVACY & CONTROL

Our MailMarshal customers tell us that they love the flexibility and powerful features that MailMarshal SMTP and MailMarshal Exchange provide. They have been increasingly asking for the same functionality to be offered as a service, so they don't have to worry about incoming threats and can dedicate their resources on more productive tasks such as implementing and monitoring policies for archiving, encryption and data leakage prevention.

MaaS in a hybrid model enables your organization to retain security and control over your email with your own MailMarshal server(s) but offload mundane tasks, such as spam management, to MaaS. The MaaS Web Console provides you with a familiar MailMarshal interface, enabling you to maintain full control over your email and measure the effectiveness of hybrid email filtering services.

HOW MAILMARSHAL AS A SERVICE WORKS

MaaS is convenient, cost effective and takes only minutes to enable. A simple redirecting of your MX record to route your email to the MaaS servers is all that is required to setup the service. Once enabled, MaaS acts as an Internet-based email filter for your organization, removing unwanted or potentially dangerous email and only delivering legitimate email to your organization.

MaaS offers carrier-grade datacenter infrastructure hosted on the latest hardware with 24/7/365 monitoring by expert technicians. The service is backed by all-hours telephone and Internet support.

SERVICES

FEATURES

BENEFITS

Anti-Spam

- Spam and phishing email filtering.
- 99.5% spam filtering with ~0.001% false positives.
- A multi-layered anti-spam system that provides consistent anti-spam protection against new and evolving spam methods.
- Personalized, intuitive end-user spam release system so email users can review their spam and ensure legitimate messages are never lost.

- **Save bandwidth** - up to 90% of today's email is spam; MaaS removes this spam ensuring you only receive the legitimate 10% of email that you want.
- **Save time** - with almost no spam in your email, your employees are free to get on with their work without the productivity drains that come with spam.
- **Save money** - on average, receiving, storing, manually identifying and deleting spam costs US\$0.04 per spam message. That may not sound like much, but the average user receives around 20,000 spam messages a year. MaaS virtually eliminates spam and associated costs, saving your organization thousands of dollars.
- **Be protected** - email is favored by hackers and criminals to deliver malicious code or to lure recipients to unsafe web sites. MaaS blocks emails with attached viruses or embedded URL's to known infection sites. This ensures your computers and confidential data are protected and preserves the stability of your business communications.

Anti-Virus

- Virus and malware email filtering.
- A layered anti-virus service incorporating traditional anti-virus scanning as well as keyword analysis, URL reputation checks and deep content inspection of attachments.
- Notification system to sender and/or recipient when a virus is detected and blocked.
- Reporting tools to measure anti-virus effectiveness.

- **Be protected** - email is favored by hackers and criminals to deliver malicious code or to lure recipients to unsafe web sites. MaaS blocks emails with attached viruses or containing URL's to preserve the stability of your business communication.
- **Save money** - diagnosing and fixing a computer virus infection can cost thousands of dollars. MaaS identifies and removes viruses and malware from your incoming email before you even receive them, ensuring that users do not accidentally open an infection occurs through vulnerability exploit
- **Save time** - suffering a virus infection can severely disrupt your email system, potentially resulting in lost business. MaaS helps to ensure that you spend your time productively focusing on your business rather than fixing email problems.

Content Filtering

- Custom, policy-based email filtering.
- Automatically manage incoming or outgoing email based on your requirements. E.g.:
 - Block oversized email messages
 - Block offensive email containing profanity or derogatory remarks
 - Restrict outgoing email containing confidential information
- Report on your email filtering policies to measure their effectiveness and identify problem employees.

- **Save bandwidth** - reject emails with large attachments or messages with non-business attachments such as MP3's, thus saving bandwidth.
- **Provide a safe and productive workplace** - employers are obligated to provide a safe workplace for employees, free from harassment and exposure to inappropriate material. MaaS filters messages containing offensive language or non-business content.
- **Preserve your reputation** - business email is like electronic letterhead. It is binding and reflects directly on your organization. MaaS enforces your acceptable use policies ensuring that employees act responsibly and prevents potentially embarrassing conduct.
- **Secure confidential information** - for many businesses, information is their most important asset. MaaS protects your intellectual property or confidential data against email leaks.

Image Analysis

- Pornographic image filtering.
- Analyzes images embedded or attached to email messages, blocking pornographic content.

- **Provide a safe and productive workplace** - filter out potentially offensive images which could lead to legal liability resulting from employee exposure to explicit content.
- **Preserve your reputation** - ensure that employees don't put your organization in a potentially embarrassing or legally liable position by emailing pornographic content.

FLEXIBLE SERVICES, PREDICTABLE COSTS

We offer a selection of tiered service packages so you can choose the services you require. For example, if you only want spam filtering services, then that is all you need to subscribe to. Service costs are fixed on a monthly basis, providing for predictable budgeting, so there won't be any surprise expenses.

COMPLIMENTARY 14-DAY TRIAL

You don't have to take our word for how effective MaaS is. It is easy to setup and we offer a free, non-obligatory trial of the service. Simply contact us using the details provided below to arrange a complimentary 14-day evaluation service or visit us on the Web at: www.marshall8e6.com.
