

M86 MailMarshal Exchange™ 5.3

M86 MailMarshal Exchange 5.3 is an exciting release providing updated support for Microsoft Exchange Server 2007 as well as Windows Server 2008.

CUSTOMERS - UPGRADING

M86 MailMarshal Exchange customers with current maintenance agreements may upgrade to M86 MailMarshal Exchange 5.3 at no additional charge.

If you are a M86 MailMarshal Exchange customer and wish to upgrade to version 5.3, but do not have a current maintenance agreement, please contact your local Marshal representative. The procedure for upgrading your M86 MailMarshal Exchange server is documented in the Technical Support section of our website. If you have a current maintenance agreement and require assistance during your upgrade, please don't hesitate to contact your local Technical Support representative via our website – www.m86security.com.

WHY SHOULD I UPGRADE?

M86 MailMarshal Exchange 5.3 provides support for the latest Microsoft technologies including Exchange Server 2007, Windows Server 2008 and Windows Vista. If you want to upgrade to the latest Microsoft technologies, but have been waiting for M86 MailMarshal Exchange to support them, now is the time.

Perhaps the greatest advantage of M86 MailMarshal Exchange 5.3 is its reduced overhead on the Exchange Server. During internal testing by our Quality Assurance team, M86 MailMarshal Exchange showed almost no impact on Exchange Server message throughput. In other words, Microsoft Exchange Server processes the same volume of email with M86 MailMarshal Exchange running as without it, so you needn't worry about M86 MailMarshal Exchange causing a detrimental impact on Exchange performance.

If you have a current M86 MailMarshal Exchange maintenance agreement, you are automatically entitled to upgrade at no additional charge.

WHAT'S NEW IN M86 MAILMARSHAL EXCHANGE 5.3

- **Support for Microsoft Exchange Server 2007** – M86 MailMarshal Exchange now supports Exchange 2007, so you can provide internal email filtering on the latest version of Exchange.

*Customers running Microsoft Exchange 2000/2003 should continue to use M86 MailMarshal Exchange 5.2

- **Near Zero Impact on Exchange Performance** – M86 MailMarshal Exchange 5.3 makes almost no impact on Exchange message processing performance. This considerable advantage is thanks to 64-bit processing and an improved architecture for the M86 MailMarshal Exchange Agent (the component which plugs into Exchange), allowing for seamless integration.
- **Support for Windows Server 2008 64-bit** – The M86 MailMarshal Exchange agent can now be deployed on Microsoft Exchange 2007 running on the Windows Server 2008 64-bit platform (requires M86 MailMarshal Exchange version 5.3.0 or later). You can also use the M86 MailMarshal Exchange management Console, Configurator and Reports on Windows Server 2008 32-bit and 64-bit versions.
- **Support for Windows Server 2003 64-bit** – The M86 MailMarshal Exchange agent can be deployed on Microsoft Exchange 2007 running on the Windows Server 2003 64-bit platform (requires M86 MailMarshal Exchange version 5.3.1 or later). You can also use the M86 MailMarshal Exchange management Console, Configurator and Reports on Windows Server 2003 32-bit and 64-bit versions.
- **Support for Windows Vista** – You can now use the M86 MailMarshal Exchange Management Console, Configurator and Reports on Windows Vista 32-bit and 64-bit operating systems.

ABOUT M86 SECURITY

M86 Security is the global expert in real-time threat protection and the industry's leading Secure Web Gateway provider. The company's appliance, software, and Software as a Service (SaaS) solutions for Web and email security protect more than 24,000 customers and over 17 million users worldwide.
