

Security Update No.120 Release Notes

Secure Web Gateway Web Appliance Series customers will receive constant updates from M86 Security, based on M86 Security Malware Lab findings.

Digital Certificate Updates

A fraudulent certificate could be used to spoof content, perform phishing attacks, or perform man-in-the-middle attacks against all Web browser users. This is due to CA certificates belonging to DigiNotar being compromised.

The following CA certificates have become untrusted by SWG as a result:

DigiNotar Root CA
DigiNotar Root CA G2
DigiNotar PKIoverheid CA Overheid
DigiNotar PKIoverheid CA Organisatie - G2
DigiNotar PKIoverheid CA Overheid en Bedrijven

This change can be observed and verified via the product's web administration interface under Administration > System Settings > Digital Certificates. These certificates have been removed from the "M86 Security Trusted Root CA" and can now be found under "M86 Security Untrusted Publishers".

Fraudulent certificates issued following this incident are known to have been used in active attacks. As such, customers are highly advised to install this update.
